Mohammed Abdullah

Experienced System & Support Engineer | Cloud & DevOps Engineer| Multi-Cloud Infrastructure
+91-7989119572 | mohammed.abdullah700@gmail.com | ab-cloud-dev.github.io

Professional Summary: Customer-focused System Engineer with 6+ years specializing in cloud infrastructure, DevOps automation, and enterprise system administration. Proven expertise in deploying AWS/Azure solutions, automating infrastructure with Terraform/Ansible, and integrating unified communications platforms. Strong track record in incident resolution, security implementation (SSL/TLS, VPN), and managing virtualised environments. Promoted from contractor to a direct Avaya role based on technical excellence and performance.

Professional Certifications & Recognition

Certified Kubernetes Security Specialist (CKS) |Certified Kubernetes Administrator (CKA) | AWS Certified Solutions Architect (SAA-CO3) | **Azure Administrator** (AZ-104) | **Azure Fundamentals** (AZ-900) | **Terraform Associate (003) | CCNA** (Routing & Switching) | MCSA: Windows Server | PCEP - **Certified Entry-Level Python Programmer** | AWS Well-Architected Professional | Server Virtualization with Hyper-V (Exam 409)

Verify all certifications at: https://www.credly.com/users/abdullah-cert

Core Technical Skills

Cloud Platforms: AWS (EC2, EKS, Lambda, VPC, IAM, S3, CloudWatch, EBS), Azure (Virtual Machines, AKS, Resource Groups),
DevOps & Automation: Kubernetes, Docker, Terraform, Ansible, Jenkins, CI/CD Pipelines, Helm Charts, Packer, Git,
Programming & Scripting: Python, Bash, PowerShell

Professional Experience

Jsoma Enterprise Pvt. Ltd

Freelance Cloud & DevOps Engineer **08/2025 - 02/2026**

- Developed and deployed **Azure Resource Manager (ARM) templates** alongside Terraform modules to automate provisioning of Azure Virtual Machines, storage accounts, and networking components, ensuring consistent infrastructure deployment across environments
- Configured and managed **Azure SQL Database** instances and **Azure Blob Storage** solutions for application data persistence and backup, implementing automated lifecycle management policies and geo-redundant storage for high availability
- Implemented **Azure Monitor and Log Analytics** workspaces to track system performance, set up custom alerts, and created dashboards for real-time visibility; utilized **Azure Cost Management** tools to analyze spending patterns and optimize resource allocation, reducing monthly cloud expenses by 20%
- Designed and deployed **scalable and resilient Azure architectures** utilizing availability sets, load balancers, and auto-scaling capabilities to ensure high availability and fault tolerance for mission-critical applications
- Assisted in writing Terraform modules/scripts to provision and manage AWS infrastructure (EC2 instances, VPCs, IAM roles/policies)

Capgemini, (Client-Avaya) & Avaya

Hyderabad

Technical Support Specialist **08/2021 - 02/2025**

Promoted to direct Avaya role in August 2023 based on performance and technical expertise

- Partnered with customers and business partners to integrate Avaya Aura systems (SM, SBC, CM, AMMG) with existing VoIP platforms, PSTN gateways, PBXs, and Unified Communications systems
- Deployed and managed Avaya Aura applications across Azure, AWS, and VMware/VSAN virtualized environments with minimal downtime during system upgrades and migrations
- Assisted customers in automating infrastructure provisioning using Terraform and Ansible, supporting rapid environment setup for testing and staging
- Implemented **Azure Security Center (Microsoft Defender for Cloud)** for continuous threat protection, vulnerability assessments, and security posture management across Azure workloads, remediating high-priority security recommendations

- Assisted customers in automating infrastructure provisioning using Terraform, ARM templates, and Ansible, supporting rapid environment setup for testing and staging
- Implemented Microsoft Teams Direct Routing integration by configuring Avaya Session Border Controller (SBC) and establishing secure SIP trunk connections
- Resolved complex network connectivity issues impacting Avaya Aura components (SBC, SM, SMGR, CM, IP Office), ensuring reliable voice and data flow
- Collaborated with Site Reliability teams and Product Development groups to resolve customer-impacting incidents and implement optimal solutions
- Managed multi-platform environments including Linux, Unix, and virtualized systems ensuring optimal performance
- Collaborated with development teams to **implement CI/CD pipelines** for Avaya application deployments

Goldstone Technologies Limited (BlueJeans Networks) **07/2017 - 12/2018**
Technical Analyst

- Led integration and configuration of enterprise video conferencing systems (Polycom, Radvision, Lifesize, Tandberg) with BlueJeans Network platform.
- Diagnosed video/audio quality issues in H.323/SIP environments using Wireshark and WebRTC logs, improving call quality.
- Analysed network metrics (packet loss, jitter, RTT), ensuring 95% compliance with performance standards
- Supported large-scale events with 10,000+ concurrent participants; identified platform vulnerabilities and coordinated fixes

Foray Software Private Limited (TCS - ICICI LOMBARD) **04/2016 – 02/2017**
System Engineer

- Managed 100+ production servers across Windows and UNIX; executed installations, upgrades, and maintenance.
- Implemented HP OpenView monitoring reducing mean time to detection by 40%
- Led Windows Server 2008 to 2012 migration for 80+ servers, completing 15% under budget with zero data loss
- Optimized IIS application pools and VMware resource allocation, improving performance by 25%

Academic Qualification

- M.Tech in Computer Networks and Information Security **2015 – 2017**
- B.Tech in Electronics and Communication Engineering **2010 - 2014**

KEY TECHNICAL PROJECTS

Accessible Over: Github.com/Ab-Cloud-dev

CI/CD Pipeline with Jenkins, Kubernetes, and Ansible
Developed automated deployment pipeline utilizing Terraform for infrastructure provisioning, Ansible for application deployment, and Jenkins for continuous integration, streamlining containerised application delivery.

Container Orchestration with EKS Fargate
Deployed serverless Kubernetes solution on AWS EKS Fargate with Load Balancer Controller integration, demonstrating scalable architecture principles and eliminating infrastructure management overhead.

AWS Infrastructure Automation
Created Lambda-based automation for cross-region EBS backups and S3 file transfers with DynamoDB audit logging, implementing comprehensive error handling and monitoring across multiple AWS regions.

AWS Serverless 3-Tier Architecture - Student Management System
Built full-stack serverless application using S3, CloudFront, API Gateway, Lambda, and DynamoDB. Implemented RESTful API endpoints for CRUD operations with IAM-based security. Configured CloudFront CDN for global content delivery with automatic scaling and pay-per-use cost optimization.
