Mohammed Abdullah

Experienced System & VOIP Engineer | Site Reliability Engineering Engineer| Multi-Cloud Infrastructure
+91-7989119572 | mohammed.abdullah700@gmail.com |

Professional Summary: Results-driven **VoIP & DevOps Engineer** with 7+ years of experience in **Unified Communications, SBC infrastructure, and cloud-native platforms**. Expertise in designing and supporting **SIP-based telephony systems, Zoom Phone integrations, and CCaaS platforms**. Strong background in **Kubernetes, Terraform, CI/CD automation, and observability**, with proven ability to improve system reliability, scalability, and performance.

Professional Certifications & Recognition

Certified Kubernetes Security Specialist (CKS) |Certified Kubernetes Administrator (CKA) | AWS Certified Solutions Architect (SAA-CO3) | **Azure Administrator** (AZ-104) | **Azure Fundamentals** (AZ-900) | **CCNA** (Routing & Switching) | MCSA: Windows Server | PCEP - Certified Entry-Level Python Programmer | Server Virtualization with Hyper-V (Exam 409)
Verify all certifications at: https://www.credly.com/users/abdullah-cert

Core Technical Skills

Cloud Platforms: AWS (EC2, EKS, Lambda, VPC, IAM, S3, CloudWatch, EBS), Azure (Virtual Machines, AKS, Resource Groups),
DevOps & Automation: Kubernetes, Docker, Terraform, Ansible, Azure Devops, CI/CD Pipelines, Helm Charts, Packer, Git,
Programming & Scripting: Python, Bash, PowerShell
VoIP & Telephony: Avaya CM/SM, SBC, Ribbon SBC SIP, RTP, SRTP, PSTN, Dial Plans, Call Routing, Codec Negotiation

Professional Experience

Jsoma Enterprise Pvt. Ltd. **Hyderabad**
Platform Engineer **08/2025 - 02/2026**

- Served as technical liaison between Cloud Operations and Engineering teams, owning end-to-end resolution of complex CI/CD pipeline failures involving Jenkins, GitHub Actions, and Terraform environments.
- Collaborated with cross-functional development and operations teams to integrate VoIP infrastructure changes, enabling seamless deployment of UCaaS services while reducing resolution time for voice system incidents. Designed and implemented **end-to-end monitoring and alerting systems** using Splunk and Prometheus, enabling proactive detection of system anomalies.
- Served as technical liaison between Cloud Operations and Engineering teams, owning end-to-end resolution of complex CI/CD pipeline failures involving Jenkins, GitHub Actions, and Terraform environments.
- Managed containerized applications using Docker and Kubernetes, implementing disaster recovery processes and ensuring resilience for voice and communication workloads across cloud environments.
- Identified repetitive operational tasks and automated them using scripting, reducing manual intervention and improving team efficiency by 25%.
- **Built operational dashboards in Tableau to visualize system health, incident trends, and performance metrics for leadership reporting.**
- **Supported production releases by validating system readiness, minimizing deployment risks, and ensuring zero downtime during critical updates.**
- Managed incident lifecycle using ServiceNow, ensuring proper escalation, documentation, and compliance with ITIL processes.
- Acted as a key interface between engineering and production support teams to coordinate release activities, manage real-time issues, and ensure smooth rollouts.

Capgemini, (Client-Avaya) & Avaya **Hyderabad**
Technical Specialist **08/2021 - 02/2025**
Promoted to direct Avaya role in August 2023 based on performance and technical expertise

- Partnered with customers and business partners to integrate Avaya Aura systems (SM, SBC, CM, AMMG) with existing VoIP platforms, PSTN gateways, PBXs, and Unified Communications systems

- Architected high availability VoIP systems using geo-redundant SBCs, load balancers, and multi-region cloud deployments, ensuring minimal downtime for voice services.
- Implemented disaster recovery strategies for VoIP platforms including failover SIP routing, backup carriers, and redundant Zoom Phone configurations.
- Ensured secure voice communication using TLS, SRTP encryption, and certificate lifecycle management across all SIP endpoints.
- Deployed and managed Avaya Aura applications across **Azure, AWS, and VMware/VSAN virtualized environments** with minimal downtime during system upgrades and migrations
- Assisted customers in automating infrastructure provisioning using **Terraform** and **Ansible**, supporting rapid environment setup for testing and staging
- Collaborated with development teams to **implement CI/CD pipelines** for Avaya application deployments
- Collaborated with DevOps, Network, and Application teams to troubleshoot complex VoIP issues across multi-vendor environments (Zoom, Avaya, SBC vendors, CCaaS platforms).
- Led incident response for voice outages and degradation, reducing MTTR through structured debugging of SIP signaling, media paths, and infrastructure layers.
- Worked closely with product and SRE teams to define SLIs/SLOs for voice services, improving reliability and performance benchmarks.
- Assisted business partners in performing regular patch management across enterprise systems, addressing critical CVEs to reduce system exposure.
- Managed multi-platform environments including Linux, Unix, and virtualized systems, ensuring optimal performance

Goldstone Technologies Limited (BlueJeans Networks) **Hyderabad**

Technical Analyst **07/2017 - 12/2018**

- Led integration and configuration of enterprise video conferencing systems (Polycom, Radvision, Lifesize, Tandberg) with BlueJeans Network platform.
- Diagnosed video/audio quality issues in H.323/SIP environments using Wireshark and WebRTC logs, improving call quality.
- Analysed network metrics (packet loss, jitter, RTT), ensuring 95% compliance with performance standards
- Supported large-scale events with 10,000+ concurrent participants; identified platform vulnerabilities and coordinated fixes

Foray Software Private Limited (TCS - ICICI LOMBARD) **Hyderabad**

System Engineer **04/2016 – 02/2017**

- Managed 100+ production servers across Windows and UNIX; executed installations, upgrades, and maintenance.
- Implemented HP OpenView monitoring, reducing mean time to detection by 40%
- Led Windows Server 2008 to 2012 migration for 80+ servers, completing 15% under budget with zero data loss
- Optimised IIS application pools and VMware resource allocation, improving performance by 25%

Academic Qualification

- M.Tech in Computer Networks and Information Security **2015 – 2017**
- B.Tech in Electronics and Communication Engineering **2010 - 2014**

KEY TECHNICAL PROJECTS

Accessible Over: Github.com/Ab-Cloud-dev

AWS Serverless 3-Tier Architecture - Student Management System

Built full-stack serverless application using S3, CloudFront, API Gateway, Lambda, and DynamoDB. Implemented RESTful API endpoints for CRUD operations with IAM-based security. Configured CloudFront CDN for global content delivery with automatic scaling and pay-per-use cost optimization.

Container Orchestration with EKS Fargate

Deployed serverless Kubernetes solution on AWS EKS Fargate with Load Balancer Controller integration, demonstrating scalable architecture principles and eliminating infrastructure management overhead.
