Mohammed Abdullah

Experienced System & Support Engineer | Cloud & DevOps Engineer| Multi-Cloud Infrastructure
+91-7989119572 | mohammed.abdullah700@gmail.com | ab-cloud-dev.github.io

Professional Summary: Customer-focused System Engineer with 7+ years specialising in cloud infrastructure, DevOps automation, and enterprise system administration. Proven expertise in deploying AWS/Azure solutions, automating infrastructure with Terraform/Ansible, and integrating unified communications platforms. Strong track record in incident resolution, security implementation (SSL/TLS, VPN), and managing virtualised environments. Promoted from contractor to a direct Avaya role based on technical excellence and performance.

Professional Certifications & Recognition

Certified Kubernetes Security Specialist (CKS) |Certified Kubernetes Administrator (CKA) | AWS Certified Solutions Architect (SAA-CO3) | **Azure Administrator** (AZ-104) | **Azure Fundamentals** (AZ-900) | **CCNA** (Routing & Switching) | MCSA: Windows Server | PCEP - Certified Entry-Level Python Programmer | Server Virtualization with Hyper-V (Exam 409)
Verify all certifications at: https://www.credly.com/users/abdullah-cert

Core Technical Skills

Cloud Platforms: AWS (EC2, EKS, Lambda, VPC, IAM, S3, CloudWatch, EBS), Azure (VM's, VNET, AKS, Resource Groups),
DevOps & IaC: Terraform, Ansible, Azure Devops, CI/CD Pipelines, Helm Charts, Packer, Git,
Containers & Microservices: Kubernetes, Docker, Helm, Microservices Architecture
Programming & Scripting: Python, Bash, PowerShell
Databases: PostgreSQL, MySQL (DDL, DML, basic query optimization)
Monitoring & Observability: Prometheus, Grafana, Azure Monitor, Log Analytics, APM concepts

Professional Experience

Jsoma Enterprise Pvt. Ltd. **Hyderabad**
Infrastructure Engineer **04/2025 - 03/2026**

- Developed and maintained Terraform modules to provision cloud infrastructure and integrated with **Python/Bash scripts** for automation tasks
- Collaborated with **Dev, QA, and Support teams** to streamline release cycles and improve delivery efficiency
- Helped in designing and implementing a **highly available Azure infrastructure** using Virtual Networks, NSGs, Load Balancers, and Storage Accounts, ensuring **99.9% uptime**
- Configured Azure Devops **multi-stage YAML pipelines**, reusable templates, and variable groups for standardized deployments
- Implemented **monitoring and alerting using Azure Monitor, Log Analytics, and Application Insights**, reducing incidents by **30%**
- Worked with PostgreSQL databases, executing basic DDL/DML operations and supporting application data requirements
- Implemented **observability solutions using Prometheus, Grafana, and Azure Monitor**, including log analysis and alerting for proactive incident detection.
- Integrated **Azure Key Vault and HarshiCorp Vault** with pipelines for secure secrets management
- Designed **multi-node pool architecture (system + user pools)** for cost optimization and workload isolation
- Troubleshot Kubernetes issues (pod scheduling, networking, resource limits), improving cluster performance

Capgemini, (Client-Avaya) & Avaya **Hyderabad**
Technical Specialist **08/2021 - 02/2025**
Promoted to direct Avaya role in August 2023 based on performance and technical expertise

- Partnered with customers and business partners to integrate Avaya Aura systems (SM, SBC, CM, AMMG) with existing VoIP platforms, PSTN gateways, PBXs, and Unified Communications systems
- Containerized applications using Docker and orchestrated workloads on Kubernetes (**AKS**) and Integrated DevSecOps practices by embedding security tools like **Snyk, Trivy, and SonarQube** into pipelines.

- Designed and deployed scalable and resilient Azure architectures utilizing availability sets, load balancers, to ensure high availability and fault tolerance for mission-critical applications
- Deployed and managed Avaya Aura applications across **Azure, AWS, and VMware/VSAN virtualized environments** with minimal downtime during system upgrades and migrations
- Assisted customers in automating infrastructure provisioning using **Terraform** and **Ansible**, supporting rapid environment setup for testing and staging.
- Troubleshot **microservices-based workloads** on Kubernetes, resolving pod failures, networking issues, and resource constraints in production environments
- Collaborated with development teams to **implement CI/CD pipelines** for Avaya application deployments
- Integrated **Prometheus with Grafana dashboards** to visualize key performance indicators (KPIs) such as pod latency, node utilisation, and API response times.
- Configured **multi-stage YAML pipelines**, reusable templates, and variable groups for standardized deployments
- Utilized **Headlamp** for real-time Kubernetes cluster visualization, simplifying troubleshooting of pods, deployments, and services.
- Collaborated with **Site Reliability teams** and Product Development groups to resolve customer-impacting incidents and implement optimal solutions(**SLOs, SLIs, and alert thresholds**)
- Addressed security vulnerabilities by implementing robust encryption protocols (SRTP, TLS, SSL) and secure authentication mechanisms
- Assisted business partners in performing regular patch management across enterprise systems, addressing critical CVEs to reduce system exposure.
- Managed multi-platform environments including Linux, Unix, and virtualized systems, ensuring optimal performance

Goldstone Technologies Limited (BlueJeans Networks) **Hyderabad**

Technical Analyst **07/2017 - 12/2018**

- Led integration and configuration of enterprise video conferencing systems (Polycom, Radvision, Lifesize, Tandberg) with BlueJeans Network platform.
- Diagnosed video/audio quality issues in H.323/SIP environments using Wireshark and WebRTC logs, improving call quality.
- Analysed network metrics (packet loss, jitter, RTT), ensuring 95% compliance with performance standards
- Supported large-scale events with 10,000+ concurrent participants; identified platform vulnerabilities and coordinated fixes

Foray Software Private Limited (TCS - ICICI LOMBARD) **Hyderabad**

System Engineer **04/2016 – 02/2017**

- Managed 100+ production servers across Windows and UNIX; executed installations, upgrades, and maintenance.
- Implemented HP OpenView monitoring, reducing mean time to detection by 40%
- Led Windows Server 2008 to 2012 migration for 80+ servers, completing 15% under budget with zero data loss
- Optimised IIS application pools and VMware resource allocation, improving performance by 25%

Academic Qualification

- M.Tech in Computer Networks and Information Security **2015 – 2017**
- B.Tech in Electronics and Communication Engineering **2010 - 2014**

KEY TECHNICAL PROJECTS

Accessible Over: Github.com/Ab-Cloud-dev

AWS Serverless 3-Tier Architecture - Student Management System

Built full-stack serverless application using S3, CloudFront, API Gateway, Lambda, and DynamoDB. Implemented RESTful API endpoints for CRUD operations with IAM-based security. Configured CloudFront CDN for global content delivery with automatic scaling and pay-per-use cost optimization.

AWS Infrastructure Automation

Created Lambda-based automation for cross-region EBS backups and S3 file transfers with DynamoDB audit logging, implementing comprehensive error handling and monitoring across multiple AWS regions.
